

MODULE # 8 - COLLECTIONS

The collections framework is response to a broad need - aggregation & retrieval.

- Interfaces \Rightarrow (Collection, Set, Map, ...)
- Classes that implement the interfaces

ArrayList, HashSet & TreeSet have the following in common:-

- in package java.util.
- .add(); .remove(); .contains()

Map - A set where every other member is associated with another subject.

\rightarrow Keys are unique, values don't have to be.

TreeMap = .put() & .get()
